

Keep care connected.

Life continues between appointments. Moonbridge gives patients a place to reflect, work with agreed goals, and bring selected moments back to their clinician.

01 For the patient

A software companion for reflection and support between sessions. Patients choose what exact words to save for their next session and can raise a concern with their clinician.

02 For the clinician

Review shared items and AI observations, draft notes and plans with AI, and approve the plan that guides support. Pause companion conversation when appropriate to the patient's care.

03 For the practice

Invite your team, manage patient companion licenses, and decide how the service fits your workflow. Staff and practice-portal access are free.

One connected care loop

01

Agree on goals

02

Reflect between
sessions

03

Choose what to
bring back

04

Review together

The clinician leads care.

The companion is AI, not a human or a licensed professional. It supports clinician-led care; it does not replace therapy or provide emergency care. Clinical decisions and treatment-plan approval stay with the clinician.
